

Portfolio Future of Construction 2025 program

Morning coffee networking & Registration

Session 1. - Technology for Survival

The final countdown has started. Artificial intelligence, digital construction management, automated project tracking, and ESG compliance are no longer options but basic requirements. Where does the construction industry stand in integrating these tools? ConTech is not a goal but the key to long-term operability and competitiveness. The question is not whether we implement it but whether we are fast enough and attract the most talented professionals.

Coffee break & Networking

Session 2. - The Path to Transformation

We have moved beyond visions. What the industry needs now are scalable, well-documented, and proven examples. Solutions that are accessible not only to large corporations but to the entire construction and supply chain. Best practices, open innovation, and interdisciplinary knowledge sharing are the cornerstones of the construction industry's future. Progress is not a solo sprint but a collective journey, and now more than ever, it is worth advancing together, as every decision holds the power to shape the future.

Lunch break & Refresh for the afternoon

Session 3. - No More Buzzwords - Only Real Solutions!

It is time for specific solutions, not slogans. The conference focuses on systems, tools, and collaboration models that provide real answers to industry challenges, from labour shortages and sustainability requirements to integrated design and execution. The goal: more efficient, transparent, and digitally supported construction processes—from concrete pouring to BIM-based handover. Now is the time to build a connected construction industry ecosystem.

Bubble time & professional networking
